

THE CORROSION WAS EASY TO SEE. BUT THE COST TO OUR OPERATIONS WASN'T.

OUR WHOLE BUILDING WAS CUSTOM. THANKFULLY, SO IS THEIR ES-1 METAL FACILITY.

WE HAD GOOD METAL—JUST TERRIBLE INSTALLATION.

OUR METAL EDGE REPLACEMENT WILL WITHSTAND THE WORST OF MOTHER NATURE.

I NEED THIS ROOF TO HAVE NINE LIVES. A NEW METAL EDGE IS THE ANSWER.

THE METAL EDGE.

The advantages of a customized approach to your roof's integrity.

The Most Trusted & Respected Roofing Company in the U.S.

800.551.5602 ■ naroofting.com

You've made a substantial investment in your building's roof, only to discover that in a few short years, the money you thought you were saving on installation or by removing edging components simply isn't adding up. You suddenly have big costs in repairs thanks to Mother Nature, wind, and corrosion in the form of new perimeter coverings such as fascia, coping, and guttering. Metal edging components can protect the life cycle of your roofing system and offer a visually appealing exterior to your facility. Yet to fully realize those benefits, installation of your metal edge roof components must be impeccable. That's why you can count on North American Roofing's superior metal edge services. Our installation professionals are highly experienced with metal roof edges, and work synergistically with our custom in-house metal manufacturing facility. Combined, our nearly singular approach in the industry allows us to offer a wide variety of metal products alongside all major manufacturer brands for use in your roofing system. Discover more by calling 800.551.5602.

METAL WORKS HARD. PUT IT TO WORK FOR YOU.

Our ES-I certified metal facility fabricates literally hundreds of thousands of linear feet of custom roof metal each month. The benefit to you is our use of top-of-the-line materials and custom-made solutions for your roofing design. Starting at the outer edge, our fabricated metal roof accessories and details not only look attractive, but are engineered and custom-fabricated to meet the specific condition of the building. This provides superior attachment—a clear advantage over many of our competitors.

We offer two tiers of roof edge metal: Our standard roof edge metal perimeter system provides a variety of options, colors, and styles, as well as a strong, protective solution for projects in areas where wind uplift is not severe. Our premium perimeter system offers the same aesthetic options as our standard system, yet is ideal for those areas that require additional coverage for extreme wind loads. With either option, we offer a full line of coping, gutters, details, trim, and full sheet panels in all gauges, colors, finishes, and metal-type choices.

THE BENEFITS OF CHOOSING METAL ROOF EDGING

- **Visually appealing:** with the variety of colors and styles of metal roof edging, the design capabilities are endless.
- **Durability:** Metal edge roof components are not just attractive; they provide a protective system that helps prevent the upward and outward pull of membrane roof materials, which tend to peel or blow off during extreme wind loads. In addition, current standards such as the International Building Code (IBC) have dictated the use of ES-I rated roof edge systems like those provided by North American Roofing. By designing and installing our ES-I certified components, we can provide our customers a safer, longer-lasting roof.
- **Installation ease:** Because our metal edge roofing components are customer engineered for functionality, they are easy to install. This ensures a proper fit and keeps your project on schedule.
- **Sustainability:** Unlike metal roofing components of the 1970s, the metal we use today lasts much longer without unattractive rust and decay. This extended life cycle benefits the environment by decreasing the demand on natural resources and the energy required to extract, manufacture, and replace an alternate system after just 15–20 years.

OUR METAL ROOFING PREFERRED PROVIDERS

When we're not offering our clients a customized approach via our in-house metal fabrication facility, we insist on the very best metal from our preferred partners; we also partner with major manufacturer brands, such as:

- Metal-Era
- Hickman
- Carlisle SynTec
- Fabral
- PAC-CLAD
- Firestone
- ATAS
- Berridge
